Abstract (en)

[origin: WO2021037831A1] The invention relates to a monitoring apparatus (6) for monitoring and/or evaluating a monitoring region (1), the monitoring region (1) being monitored using image technology by means of a camera arrangement, the camera arrangement being designed to provide monitoring images, the monitoring region (1) having an identification device (9), the identification device (9) being designed to determine a global identifier for a person (7a-d). The monitoring apparatus has: an evaluation device, the evaluation device being couplable to the camera arrangement in order to transfer the monitoring images using data technology, the evaluation device being designed to detect a person (7a-d) in the monitoring region (1) on the basis of the monitoring images and to generate at least one evaluation data set for the detected person (7a-d); and a fusion device for generating a personalized evaluation data set, the fusion device being designed to assign the global identifier associated with the person to the evaluation data set of a detected person (7a-d) in order to generate the personalized evaluation data set.
