Abstract (en)
[origin: WO2021037846A1] Said method comprises the steps of: a) providing a structure comprising: - a crystalline silicon-based substrate (1); - a first dielectric layer (2) which comprises boron atoms and is formed on the first surface (10) of the substrate (1); - a tunnel oxide film (3) formed on the second surface (11) of the substrate; - a polysilicon layer (4) formed on the tunnel oxide film (3); - a second dielectric layer (5) which comprises phosphorus and/or arsenic atoms and is formed on the polysilicon layer (4); b) applying heat treatment to the structure so as to: - diffuse the boron atoms under the first surface (10) of the substrate (1) so as to form a first doped semiconductor region (100); - diffuse the phosphorus and/or arsenic atoms in the polysilicon layer (4) so as to dope the polysilicon layer (4).
