Abstract (en)

[origin: WO2021040596A1] There is disclosed a method of operating a wireless device (10) in a radio access network, the wireless device (10) being configured with a slot configuration according to which a slot has multiple subslots, the method comprising transmitting acknowledgement information reporting on subject transmission in a subslot based on a received timing indication indicating a subslot for transmitting the acknowledgement information, the timing indication being indicative of a subslot of a set of available subslots. There are also disclosed related methods and devices.
