Abstract (en)
An abnormality detecting device (1) for detecting an abnormality of at least one rotating body, the at least one rotating body being configured to transmit power generated by an actuator to open and close a door (3R, 3L), the abnormality detecting device (1) including: an obtaining unit (31) for obtaining, during movement of the door (3R, 3L), a door operation signal related to at least one of opening operation or closing operation of the door (3R, 3L); and a determination unit (32) for determining whether or not the door operation signal includes a periodic component according to a rotational period of the at least one rotating body.
