Abstract (en)
A heat exchanger for heat exchange between a first fluid and a second fluid is provided. The heat exchanger includes a first manifold, a second manifold, heat exchange tubes and a fin section. The heat exchange tubes is axially extending and providing a fluidal communication between the first manifold and the second manifold for the first fluid. The second fluid flows between the heat exchange tubes. The fin section is in contact with the heat exchange tubes for facilitating heat exchange between the first fluid and the second fluid. The fin section includes a first louver section having louvers of first louver length and a second louver section having louvers of second louver length. The second louver section is arranged subsequently to the first louver section with respect to transverse direction of intended fluid flow direction. Further, the second louver length is different from the first louver length.
