Abstract (en)

[origin: EP4023997A1] Embodiments of this application provide a heat exchange plate and a heat exchanger including the heat exchange plate. The heat exchange plate includes: a base board, where the base board includes a first edge along a first direction and a second edge along a second direction, and the first direction and the second direction are different directions; first flow guiders, where the first flow guiders are disposed on the base board, and are configured to guide flowing of air flows, where a plurality of the first flow guiders are arranged along the first direction at intervals into one column, and a plurality of columns of the first flow guiders are arranged along the second direction at intervals; and supporting structures, where the supporting structures are disposed on the base board, the supporting structures extend along the first direction, and the supporting structures and each column of the first flow guiders are arranged alternately along the second direction at intervals. The heat exchange plate provided in this application can guide air passing through the heat exchanger, to enable air flows to flow along a flow guide direction, thereby improving heat exchange efficiency of the heat exchanger for the air flows.
