Abstract (en)

[origin: CA3155313A1] The invention relates to a device (10) for closing a perforation (21) in a wall (2), the closing device (10) having closing means (11) comprising: - a central portion (14), - a first end (12) having a first hooking means (12') and a second end (13) having a second hooking means (13'), the two ends (12, 13) being arranged on either side of the central portion (14), the closing means (11) being made of a shape memory material and having a structure allowing a variation in the relative position of the hooking means (12', 13') with respect to one another, depending on the state of compression of the central portion (14).
