Abstract (en)
[origin: WO2021043626A1] The invention is based on a cooking-appliance system (10a-b), in particular an induction-cooking-appliance system, having at least one hob (12a-b), which has at least one hob panel (14a-b) with at least one extractor aperture (16a-b) for suction extraction of vapours which are produced in an operating state, having at least one extractor unit (18a-b), which is provided for suction extraction of the vapours through the extractor aperture (16a-b), and having at least one oven (20a-b). In order to provide a system of the type in question which has improved design properties, it is proposed that, in an installation position, the oven (20a-b) should be arranged beneath the hob (12a-b).
