Abstract (en)
[origin: EP4026528A1] A wheelchair (10) is described comprising: a central crosspiece (12), at the ends of which two wheels (14, 16) are connected, and a column (22) having a first end connected to a seat (21) and the opposite end connected to an anti-tip wheel assembly (31), the column (22) being connected in a sliding manner to the central crosspiece (12) and fixed by means of a locking system (50) comprising a locking element (51) associated with the central crosspiece (12); the wheelchair (10) further comprises first locking means (61) configured to fix the locking element (51) to the central crosspiece (12) and second locking means (62) configured to fix the locking element (51) to the column (22), so as to lock the column (22) between the central crosspiece (12) and the locking element (51) in the position desired by a user.
