Abstract (en)

[origin: EP4026980A1] The invention relates to an assembly coupling the shaft of a roller blind to its housing, comprising a movable sleeve (1) and an intermediate sleeve (2) which move relative to each other so that the movable sleeve (1) is partially inside intermediate sleeve (2) and the coupling assembly is in its operating position when axial movement of the movable (1) sleeve inside intermediate sleeve (2) is locked and in an assembly position, when axial movement of the movable sleeve (1) inside intermediate sleeve (2) is unlocked, wherein a ring (3) is seated on the movable sleeve (1) locking axial movement of movable sleeve in the working position of the coupling assembly.
