Abstract (en)  
The installation limiting the viral cross contamination of persons in a room - especially indoor public places according to the invention is characterized in that it contains at least a filtering device (1) treating breathable air, adapted to draw and filter air from the interior of the room or from the outside of the room, connected to the system distributing treated air (2) individually for each person in the room, whereas, the system distributing treated air (2) consists of at least one main air trunk line (2.1) which via distributive tees (2.3) or distributive crosses (2.4) is connected to the lateral air trunk lines (2.2), whereas, distributive tees (2.5) on lateral trunk lines (2.2) and distributive tees (2.10) and distributive crosses (2.11) on main trunk lines (2.1) are connected to air connection nozzles (2.8) via adjustable valves (2.6)The filtering device (1) treating breathable air is characterized in that it consists of at least a casing (1.1) equipped with at least one air inlet (1.6), (1.7) and at least one treated air outlet (1.8) and a control panel (1.9), whereas, inside the casing (1.1) there is a set of filters which consists of at least an air filter for initial purification (1.3), a blower (1.2), an antiviral air filter (1.4) and a specialist air filter (1.5) containing an absorber with activated charcoal and moreover preferably the device is equipped with agents (1.20) or (1.22) or (1.23) for additional air treatment.
