Abstract (en)

[origin: EP4027238A1] A card rendering method and an electronic device are provided, and relate to the field of terminal technologies. The method includes: An electronic device sends a request for obtaining related information of a target card to a server; and receives related information that is of a target card and that is sent by the server. The electronic device preliminary renders the target card based on a first layout snapshot, and displays the target card on a display screen; parses a first file package set of the target card to obtain a second rendering instruction set, selects a rendering instruction in the second rendering instruction set other than a first rendering instruction set; and renders again the target card according to the selected rendering instruction, and updates the target card displayed on the display screen. In this technical solution, the electronic device can quickly present a card to a user, to improve user experience.
