Abstract (en)

[origin: WO2021047968A1] The invention relates to a method for the application of spray liquid containing plant protection agents onto rows of plants, with an agricultural spraying device that comprises groups of spray nozzles, wherein the groups of spray nozzles and the spray nozzles of each group are spaced apart from one another perpendicular to a travel path of the agricultural spraying device that extends parallel to the rows of plants. The method comprises the following steps: Selecting at least one spray nozzle from at least some of the groups of spray nozzles by means of control signals of a control unit to control the spray nozzles; applying spray liquid with the selected spray nozzles onto a row of plants in each case; the spray liquid being applied from the selected spray nozzles as strip application in the form of respective strips in which the application of the spray liquid does not overlap within a nominal spray angle of directly adjacent spray nozzles of the selected spray nozzles. The invention also relates to an agricultural spray device designed to carry out the method according to the invention, and to a corresponding computer-readable medium.
