Abstract (en)

[origin: WO2021048180A1] The invention relates, in a first aspect, to a device (10) for supporting a constituent part of a tableting machine, wherein the device (10) comprises, as components (12, 14, 16), a top part (12), an intermediate element (14) and a bottom part (16). In further aspects, the invention relates to a tableting machine comprising a described device, and to a method and the use of the device for adjusting a position of a constituent part of a tableting machine. By means of the proposed device, it is possible in particular to easily, quickly and reproducibly adjust the filling shoe clamping plate of a tableting machine and therefore preferably the position of the filling appliance above the die table preferably during the machine set-up, but also during the operation of the rotary press, such that the material loss is minimal.
