Abstract (en)

[origin: WO2021047922A1] The invention relates to improved methods and devices for print finishing, in particular for film transfer. The proposed device for print finishing comprises a transport device for moving a printed material along a transport path, a printing device for applying a radiation-curing plastic onto the printed material in a first section of the transport path, a film supplying device for supplying transfer film to a surface of the printed material in a second section of the transport path, and an irradiation device for curing the radiation-curing plastic in the second section of the transport path, which comprises at least one radiation source.
