Abstract (en)

[origin: WO2021048384A1] The invention relates to a stroller comprising a stroller chassis (10) and a child receiving device (11) for receiving at least one child. The child receiving device (11) can be oriented in at least two different orientations, in particular a forwards orientation and a rearwards orientation, relative to the stroller chassis (10), wherein at least one receiving section of the child receiving device (11) is movable, in particular at least partly pivotal, such that at least one first and second setting of the child receiving device (11) can be set, and a coupling device (36) is provided and designed such that a conversion from at least one first orientation of the child receiving device to a second orientation is blocked in at least one first setting of the child receiving device (11).
