Abstract (en)

[origin: WO2021048828A1] A multifunction system that can be installed in a space (E) at a ceiling (C), comprising at least one longitudinal beam (20) defining a first axis (X) that can be coupled with the ceiling (C) comprising a pair of mutually faced side walls (2122) and an upper wall (23) designed to be faced to the ceiling (C) cooperating with each other to internally define a compartment (24) open at the lower part, at least one longitudinal profile (140) that can be inserted into the open compartment (24) so as to be removably coupled with the beam (20), at least one first fixed partitioning element (51,52) comprising at least one plate-like element (12) and at least one accessory (150) for supporting a second slidable partitioning element (62). The fixed partitioning element (51,52) and the support accessory (150) can be alternatively selectively coupled with the same longitudinal profile (140).
