Abstract (en)

[origin: EP4029611A1] Machine (1) for the treatment of a laminar support (2) on which at least one chemical substance intended to be applied to a leather (4) is spread, configured to be inserted in a treatment line (100) of leather (4) and comprising:- a first reel (3) formed by said laminar support (2) intended to receive said chemical substance which must then be applied to said leather (4),- a second reel (36) formed by said laminar support (2) after said chemical substance has been applied to said leather (4),- an apparatus (42) for removing from said laminar support (2), before its winding on said second reel (36), of the residues of said chemical substance that has not been applied to said leather (4), characterized in that during use:- said second reel (36) is in a position substantially below the footprint of said apparatus (42) in the direction of development of said treatment line (100).
