Abstract (en)

[origin: CA3151556A1] The invention relates to a motorised walker (1) comprising a frame (10) having a front portion (10a) and a rear portion (10b), a pair of wheels (11), a wheel arranged to support the front portion of the frame, one of the wheels being coupled to a travelling motor (20), the motorised walker (1) being characterised in that: - the frame (10) is provided with two handrails (100) having a longitudinal axis forming an angle, with an axis perpendicular to the ground, of between 20° and 40°, each handrail being associated with a translatable movable electronic handle (200), - it comprises at least one lifting motor (30) arranged so as to move the electronic handles (200), and - at least one of the electronic handles (200) comprises one or more sensors coupled to a control module (40) configured to control the lifting motor (30) and the travelling motor (20).
