Abstract (en)

[origin: WO2021052889A1] The invention relates to a method for selectively controlling the temperature of passenger compartments of a vehicle, wherein in the method current temperature-control states of the passenger compartments and current states of occupation of the passenger compartments are determined, a temperature-control performance of the entire vehicle is calculated on the basis of the current temperature-control states of the passenger compartments, a state of occupation of the entire vehicle is calculated on the basis of the current states of occupation of the passenger compartments, and passengers are directed into various passenger compartments as a function of the current temperature-control states of the passenger compartments, the calculated temperature-control performance and the calculated state of occupation of the entire vehicle.
