Abstract (en)
[origin: WO2021053150A1] The invention relates to a valve for a packaging container, said valve comprising at least one base film (10) having an opening (11), at least one frame film (13) surrounding a free area (17), and at least one membrane (12) arranged on said base film (10) and covering said opening (11). A fluid is provided between said membrane (12) and the base film (10), the membrane (12) being connected to a surrounding film (20) via at least one connection point (22), the surrounding film (20) being connected to the base film (10) on one side and to the frame film (13) on the other side, and the membrane (12) being arranged movably within the free region (17). The surrounding film (20) is open at least at one point, so that a channel (18) is formed.
