Abstract (en)

The invention relates to a pallet (50) for coupling with a superstructure (52) for managing goods. The pallet comprises a rest platform (54), a plurality of supports (56) suitable for raising the rest platform with respect to a floor (58), and a perimeter channel (60) which develops around the rest platform. The pallet further comprises a plurality of snap joints (62) placed along the perimeter channel and comprised in the perimeter channel. The invention also relates to a superstructure suitable for being mounted on the pallet. The superstructure comprises a plurality of vertical walls, wherein at least one vertical wall (86) comprises a lower edge (84) along which slots (88) suitable for engaging the snap joints and notches (90) suitable for preventing the interference of the vertical wall with transverse partitions (82) are obtained. Finally, the invention relates to an assembly (108) comprising a pallet and a superstructure.
