Abstract (en)  
[origin: EP4032844A1] A winding unit (2) includes a tension applying device (31) that applies tension to a yarn (Y), a holding section (32c) that holds a first yarn (Y1) when the yarn (Y) is disconnected into a first yarn (Y1) and a second yarn (Y2) in the yarn running direction, an arm driving motor (32d) that moves the holding section (32c) between a first position and a second position, and a unit controller (15). The unit controller (15) controls, in a state in which the first yarn (Y1) is held in the holding section (32c), the arm driving motor (32d) to move the holding section (32c) from the first position to the second position, and then return and stop the holding section (32c) at the first position.
