Abstract (en)  
[origin: EP4032848A1] This application relates to a fork and a carrying robot. The fork includes a telescopic arm, a temporary storage tray, and a sliding assembly. The telescopic arm includes a fixed arm, a movable arm, a pusher assembly, and a driving assembly. One end of the movable arm is connected to the fixed arm, and an other end thereof is connected to the pusher assembly. The movable arm is telescopically movable relative to the fixed arm with an action of the driving assembly, and the pusher assembly is configured to pull in or push out goods. The temporary storage tray is mounted to the fixed arm and is configured to temporarily store the goods. The sliding assembly is mounted between the fixed arm and the temporary storage tray and is capable of pushing the temporary storage tray to make the temporary storage tray extend relative to the fixed arm. An extending direction of the temporary storage tray is consistent with an extending direction of the movable arm. According to the fork and the carrying robot of this application, the sliding assembly is capable of pushing the temporary storage tray to make the temporary storage extend relative to the fixed arm. Therefore, when the fork of this application pulls in or pushes out the goods, containers can be stably transferred between a stationary rack and the temporary storage tray.
