Abstract (en)
The present invention proposes a cooking appliance (100) having a cooking cavity (10) defined within a top wall (11), a bottom wall (12), a rear wall (13), and opposing side walls (14) comprising, a burner (20) having a cylindrical casing (21) and at least one wing unit (22) radiating heat within said cooking cavity (10), an exhaust channel (30) having an inlet (31) which is in fluid communication with the cooking cavity (10) and an outlet (32) which is in fluid communication with an exterior of the cooking appliance (100) wherein the exhaust channel (30) is configured to allow fresh air to enter into the cooking cavity (10) and to allow exhaust gases to vent therefrom and the inlet (31) which is disposed on the top wall to be aligned above a middle portion (23) of the burner (20) so as to provide an airflow region (50) provided between the wing units (22) and the top wall (11) of the cooking cavity (10) wherein the inlet (31) is positioned at a predetermined location such that the inlet (31) is enclosed in an orthogonal projection of the burner (27) on a plane containing the inlet (31) wherein a cross section (312) area of the inlet (31) is sized to be less than a predetermined value.
