Abstract (en)

[origin: CA3155459A1] The invention relates to a method for manufacturing a protective glove, the method providing for: the production of a textile support member (2) having at least one zone for joining a portion of the support member to the remainder of the support member; the application of a polymer coating solution to at least a portion of the textile support member (2) including the joint zone; processing the textile support member so that the solution forms a polymer coating (11) on the external surface of at least the joint zone; the method providing for processing of the coated joint zone which is designed to totally destroy the textile support member (2) in the zone in order to form a joint (9) between the portion and the remainder of the support member (2), which joint is formed by the polymer coating (11), the joint being designed to be able to tear under the effect of a threshold force for tearing off the portion.
