Abstract (en)

[origin: WO2021058698A1] The invention relates to a system (1) for analysing the use of items of footwear (11) configured to determine an index of association between values of use parameters (101) and values of shoe parameters (201), the system comprising a computer calculation device (30) configured to: Obtain or load values of posture or mobility parameters (301) calculated from raw data generated by at least one connected sole (10); - Obtain or load values of geographic parameters (401) corresponding to a location of the at least one connected sole (10); - Obtain or load values of shoe parameters (201) comprising values of structural parameters, geometric parameters and/or aesthetic parameters of the item of footwear (11); - Calculate one or more values of use parameters (101); - Determine a value of index of association between the value or values of use parameters (101) and the values of shoe parameters (201).
