Abstract (en)
[origin: CA3154662A1] A hair treatment instrument (1) comprising an instrument body (2) having a handle adjustment element (24) rigidly connected to the instrument body, a detachable handle (3) having an attachment element (30) configured to be detachably attached, in an assembly position, to the handle adjustment element (24). A hollow housing (25) is provided in the handle adjustment element (24). A protuberance (5) of the attachment element (30) is shaped so as to translationally engage in an axial direction (I-i) and to be immobilised in said hollow housing (25) in an assembly position. A first magnet (6) housed in the hollow housing (25) engages with a second magnet (7) housed in the protuberance (5) in order to detachably hold, through magnetic attraction, the protuberance (5) in said hollow housing (25) in an assembly position. Anti-rotation means comprising a ring of housing teeth (28) provided in said hollow housing (25) and a ring of protuberance teeth (50) provided on said protuberance (5), the housing teeth meshing with the protuberance teeth in an assembly position.
