Abstract (en)

[origin: CA3155446A1] The invention relates to a filter element (2), in particular a replaceable filter element, more particularly for separating particles and/or gases and/or liquids, in particular a filter cartridge for use in a filter, more particularly a compressed air filter, in particular as a component of a filter comprising multiple filtration stages, the filter element comprising a substantially tubular body (27) with an annular end face (21) that faces a filter head, an underside (28), and a circumferential surface (29), wherein multiple, preferably four, retaining arms (30), running radially in relation to the central axis (18), are provided in the region of the end face (21) and a toroidal filter-element sealing surface (6) is provided on said end face (21), and the retaining arms (30) protrude in relation to the filter-element sealing surface (6). The invention further relates to a filter comprising a filter element (2) of this type.
