Abstract (en)
[origin: WO2021058661A1] The invention relates to a heat-sensitive recording material comprising phenol-free organic colour developers, in particular comprising a colour developer mixture comprising phenol-free organic colour developers, a heat-sensitive recording layer and a coating composition for the production thereof. The invention also relates to the use of the heat-sensitive recording material, to the use of an organic colour developer of formula I for improving the durability of the printed image of a heat-sensitive recording material and to a method for producing a heat-sensitive recording material.
