Abstract (en)

[origin: WO2021058272A1] The invention relates to a resistor assembly (10) for a tap changer (1), having at least one resistor element (20) which is held by at least two resistor holders (30). The resistor assembly (10) comprises: a baseplate (11) with at least one opening (12), on which the at least two resistor holders (30) for holding the resistor element (20) are arranged; and a guide (31), which is formed in each resistor holder (30), each guide (31) positioning a first end (201) and a second end (202) of the resistor element (20) between the two resistor holders (30) in relation to a longitudinal direction (L). According to the invention, a contact point (24) of the resistor element (20) comes into electrical contact with contacts (40) of the tap changer (1) when a resistor element (20) is inserted into the resistor holder (30).
