Abstract (en)

[origin: WO2021058252A1] The invention relates to a control module (2) of a vehicle, comprising a plurality of electromechanical functional elements (8) which are arranged on a carrier plate (4) and fixed in an interlocking and force-fitting manner to the carrier plate (4) by means of clamping elements, wherein the clamping elements are formed on a pressure plate (14) which is secured to spacers (6) of the carrier plate (4). In order to simplify production and fitting of the pressure plate (14) which is provided with the clamping elements and in order to be able to use them with functional elements (8) having different structural heights, provision is made for the spacers (6) to have a slightly greater height (H) than the structural height (HB) of the highest functional element (8), and for the pressure plate (14) for each of the functional elements (8) to be provided with at least one clamping element which is designed as a clamping lug (20, 20'), wherein the clamping lugs (20, 20') are each arranged at an opening (18, 18') in the pressure plate (14), which opening is partially closed by said clamping lugs, and are designed in a manner angled in the direction of the carrier plate (4).
