Abstract (en)  
Provided is a fishing spinning reel in which water entered inside can be effectively drained to the outside of the reel without stagnation of the water therein and thereby damage of parts can be prevented while preventing line dropping. The fishing spinning reel according to the invention has a line anti-drop portion (20) attached to a front portion of the rotor (3) and formed in an annular shape that prevents a fishing line (S) from entering inside. A drain hole (20A) is formed in the line anti-drop portion (20) to discharge water entered inside to the outside of the rotor (3).
