Abstract (en)

A heating device includes a heating element 14 comprising a main body provided with a plurality of through-holes in which heating wires 10 are disposed, and a high-frequency heating assembly comprising an induction coil 17 and a container 21 for holding tobacco materials. In a power-on state, the heating element and the high-frequency heating assembly both operate to heat tobacco materials and produce smoke or vapour. A variable frequency power supply 5 is connected to the induction coil 10, and a temperature probe 11 is connected to the power supply board 7 to protect against overheating. A hookah comprising the heating device and a smoke filter with a water container (A) is also provided.
