Abstract (en)
The present invention relates to a device (1) for supporting reels of film, in particular to be attached to each end of a reel, comprising a flat body (10) substantially quadrangular in shape with a lower side (11) destined to act as supporting base and at least one support means (21) adapted to engage a spindle of the reel of film, wherein said body comprises a first inner plate (13), to be placed against one end of the reel, and a second outer plate (14), parallel to and facing the first plate, said body (10) further comprising a plurality of inner ribs (15) that join the first plate (13) and the second plate (14), said ribs (15) being rectilinear and extending along a direction perpendicular to the lower side body (11) and forming a plurality of inner passages (16).
