Abstract (en)

The present invention provides a process for the removal of contaminants from contaminated recycled or renewable organic material, comprising the steps of: i) providing a first solvent to a vessel containing the recycled or renewable organic material; ii) mixing the recycled or renewable organic material and the first solvent and then allowing a solvent phase, comprising at least a portion of the first solvent and at least a portion of the contaminants, and an oil phase, comprising at least a portion of the recycled or renewable organic material, to form; iii) removing at least a portion of the solvent phase from the vessel and retaining at least a portion of the oil phase in the vessel; and iv) optionally repeating steps i) to iii) one or more times.
