Abstract (en)

An electronic device (10), comprising a folding screen (20) and a housing (40). The folding screen (20) is mounted on the housing (40), and the housing (40) comprises a rear cover (420) provided opposite to the folding screen (20). The folding screen (20) comprises a first area (240), a bending area (220), and a second area (260), wherein the first area (240) comprises a first connection end (242) adjacent to the bending area (220); when the folding screen (20) is in an unfolded state, a first distance is formed between the first connection end (242) and the rear cover (420); when the folding screen (20) is in a folded state, a display surface of the first area (240) is provided opposite to a display surface of the second area (260), a second distance is formed between the first connection end (242) and the rear cover (420), and the second distance is smaller than the first distance. A gap of a bent position of the electronic device (10) can be very small or even no gap exists, so that a foreign matter is not easy to enter.
