Abstract (en)

A nut device (30) for a stringed instrument (10) is described. The nut device includes a slider nut (32), which is shaped like a stick, rod or beam, and a support frame (33) including a guide bar (35) intended to be mounted on one side of a neck (15) of the stringed instrument (10). The slider nut (32) is in turn slidably mounted on the guide bar (35) so as to assume a plurality of positions along the guide bar. The slider nut (32) is intended to make contact with all the strings (19). Each of the said plurality of positions along the guide bar (35) corresponds to a plurality of positions along the neck (15) of the stringed instrument (10) above the strings (19). The present disclosure also relates to use of a nut device and a method for playing a stringed instrument by means of a nut device.
