Abstract (en)

[origin: WO2021063611A1] An elevator car (100) for a double-deck elevator (400), which elevator car (100), when operational, has two cabins (200; 402) arranged one above the other, each of said cabins (200; 402) being accessible via a different floor when the elevator car (100) has come to a halt, wherein the elevator car (100) has: an elevator car frame (102) comprising at least one side member (108) that extends in the longitudinal direction (107) of the elevator car frame (102); a first support structure (104) disposed in the elevator car frame (102) for supporting a first (200) of the cabins; a second support structure (106) disposed in the elevator car frame (102) for supporting a second (402) of the cabins; and a linear guide device (112) designed to movably couple at least the first support structure (104) to the side member (108), so that the first support structure (104) can be displaced along the side member (108) relative to the second support structure (106).
