Abstract (en)

[origin: WO2021064500A1] The present invention relates to a postural system (1) for equestrian rehabilitation, said system allowing to ensure correct positioning of the patient and correct passage of stimuli from the horse to the patient, even in the case of patients with severe motor disabilities. Said postural system is modular and customizable and allows positioning the patient on the horse both in a sitting position and in a supine or prone position. According to the invention, the postural system comprises a base body (3) and a plurality of shaped or shapeable blocks (7, 9, 11, 13, 15, 17) adapted to be removably connected to said base body and repositioned onto said base body. Thanks to the invention, by selecting each time the number, shape and orientation of said shaped or shapeable blocks, it will be possible to take into account the specific morphology of the user and facilitate perfect placement of the body and correct weight distribution.
