Abstract (en)  
[origin: EP3800427A1] The invention relates to a firearm with tube ejection, in particular a carbine, having a barrel (1) with a movable slide (18) with a breech head (19), with a breech block (42), with a movable ejector (21) and with a firearm-fixed functional edge (35) in the direction the barrel axis (38) which forces the ejector (21) into its ejection position upon return of the slide (18) after firing a shot. To create an ejection which is always uniform, an ejector lever (28) is arranged rotatably on the slide (18) about an axis of rotation (32) along a normal to the firearm center plane (44), and the ejector lever abuts the functional edge (35) during the backwards movement of the slide (18) and is thereby rotated, so that it abuts an abutment surface (43) of the ejector (21) and forces it into the ejection position.
