Abstract (en)
[origin: EP4039125A1] The present invention refers to a hairdrying device; in particular, the present invention refers to a hairdrying device provided with a depression formed in the external body at its rear part. This allows the user to grip the hairdryer using this depression, as an alternative to the traditional handle of a hairdryer, thus providing the hairdryer with improved ergonomics. In fact, the user can decide at his/her convenience which handle to use safely, and with a secure grip, according to operational needs.
