Abstract (en)

[origin: CA3204123A1] The invention relates to a mirror device (101) having a mirror surface (1), at least one light source (2), a control device (3), and first and second control elements (4, 18) connected to the control device (3) via a cable. The light source (2) is operable by the first and second control elements (4, 18). By means of the first control element (4), a first illumination mode (5) of the light source (2) can be switched on and off. By means of the second control element (18), a second illumination mode (6) of the light source (2) can be switched on and off. The first illumination mode (5) is a night light mode and in particular has a lower blue light component than the second illumination mode (6). The first illumination mode (5) differs from the second illumination mode (6).
