Abstract (en)  
[origin: WO2021069032A1] The invention relates to a device for generating sensory stimulation for a child by means of a body made of an elastic material and a bellows, which is embedded in the elastic material of the body, comprising a first converter unit (81) for generating a fluid flow to move a lying surface for a child, a second converter unit (11) for generating noise in a fluid, corresponding to at least heartbeats or human speech or music, and a fluid line (21) for simultaneously conducting the fluid flow generated by the first converter unit (81) and transmitting the sound generated by the second converter unit (11) to a bellows in a body (60) made of an elastic material.
