Abstract (en)
[origin: WO2021074166A1] The invention relates to a knife (1) comprising a blade body (2), wherein the blade body (2) has a cutting edge (4) running in the longitudinal direction (3) of the blade body (2) and a knife back (7) opposite the cutting edge (4), as well as comprising a handle (5) connected to the blade body (2). In order to produce a knife (1) with a simple construction, which allows sufficient pressure to be exerted on the cutting edge (4) and a straight cut to be executed, according to the invention the handle (5) is arranged above the knife back (7) via a connecting piece (6), and is rigidly connected to the blade body (2) such that, when the blade body (2) is in a vertical position, a vertical handle plane (G) formed by the central longitudinal axis (9) of the handle (5) is offset laterally to a cutting plane (S) formed by the cutting edge (4).
