Abstract (en)

[origin: WO2021069474A1] The invention relates to a blown film installation for producing tubular films or film webs, comprising a nozzle head for extruding a tubular film, a lay-flat implement and/or a squeezing device for laying flat and/or squeezing the tubular film in order to produce a double-layer film web from the tubular film, and a stretching device, by which the double-layer film web can be stretched in the longitudinal direction. At least a first and at least a second thickness measuring device for measuring the thickness of layers of the film web are provided downstream of the stretching device, wherein the thickness of a single layer of the film web can be measured by means of at least one of the thickness measuring devices.
