Abstract (en)

[origin: WO2021069637A1] The present invention concerns the forming of a container by folding of a cardboard plate with at least one cover and in particular one tab, by means of a forming device (2) comprising at least one conveyor (3) driving said cardboard plate (100) in a movement direction; means (5) for folding back said cover (104); the folding-back means (5) comprising at least one bearing surface (50) with the cover (104), the bearing surface (50) being actuated according to a movement from an initial position to a deployed position, folding-back the cover (104), and vice versa; characterised by the fact that the bearing surface (50) is movable in said movement direction, the bearing surface (50) comprising at least one motorised endless belt (500) in the movement direction.
