Abstract (en)
[origin: WO2021068022A1] The invention relates to an apparatus for preventing vehicles from rolling, comprising two chocks (4, 5) which are connected to one another by means of a resilient sliding and pushing part (3), the chocks (4, 5) being arranged facing either towards one another or in opposite directions, characterised in that the chocks (4, 5) are connected to the sliding and pushing part (3) so as to be rotatable about respective axes of rotation (6).
