Abstract (en)

[origin: WO2021069419A1] The invention relates to a printer (200) for outputting a printed product (214). The printer (200) comprises a print head (202) for printing on a print medium (208) that moves in a longitudinal direction (210). The print medium (208) comprises a plurality of separate or separable labels that can be removably arranged on a carrier (208') along the longitudinal direction (210). The printer (200) also comprises a material interface (256) for outputting the print medium (208) printed by the printer (200) as a printed product (214). The material interface (256) comprises a dispensing edge (201) and a support (201') via which the carrier (208') can be deflected in the longitudinal direction (210) behind the print head (202). The dispensing edge (201) is arranged in a first position relative to the support (201') to induce a deflection of the carrier (208') that detaches the respective label. The dispensing edge (201) and the support (201') are arranged in a second position relative to each other to induce a deflection guiding the respective label onto the carrier (208').
