Abstract (en)

[origin: WO2021070040A2] The disclosure relates to a package blank (100) configured to be erected and thereby form a package for holding a bobbin (300), the package blank comprising: a set of side wall panels comprising two side wall panels (101, 103) configured to form two opposing outer side wall panels of the package, wherein each outer side wall panel is foldably connected to a respective inner side wall bottom flap (104) and a respective inner side wall top flap (106), wherein respective inner side wall bottom flap (104) is configured to form an inner side of a bottom part of respective side wall and is provided with an upwardly facing cut-out (108) configured to receive an associated end portion of a bobbin (300), and wherein the respective inner side wall top flap (106) is configured to form an inner side of a top part of the respective side wall and is provided with a downwardly facing cut-out (110) configured to at least partly cap the associated end portion of said bobbin (300). Also disclosed is a package formed of the package blank, a bobbin and a sleeve blank (400) configured to be folded into a bobbin coil.
